

# evidence-ledger

## Evidence ledger

Every claim in `docs/A1-brief.md` traced to a source, the method used to obtain it, the date, and where the raw output lives. Regenerate everything with the commands in `README.md`.

### Sources

#### E1

- Type: Personal operation record
- Source: 选课规划-已选课程-2026-09-05.xlsx, 选课规划-已选课程-2026-09-15.xlsx, planner backup 选课地图-本地备份 (3).json
- Method and date: file inspection, hashing, cross-version cell diff; 2026-09-25 to 2026-09-27
- Where the output lives: `raw/measurements/plan-versions.md`

#### E2

- Type: Official rule text
- Source: selection instructions plus the two official workbooks: 2026-2027 学年秋季和春季开课计划表 0828.xlsx, 2026-2027 学年研究生核心课和专业课列表...0828.xlsx
- Method and date: read from the imported records; stable import sha256 recorded; 2026-09-27
- Where the output lives: `raw/measurements/snapshot-provenance.md`

#### E3

- Type: Official workbooks, structured import
- Source: same two workbooks, via the planner backup (4,877 records)
- Method and date: `python3 src/freeze_snapshot.py`; 2026-09-27
- Where the output lives: `raw/sections-snapshot.json + .sha256`, `raw/measurements/snapshot-provenance.md`

#### E4

- Type: Public course listing
- Source: `https://courseplanner.cysdy.cn/default-courses.json` (2,991 entries, 8,103,455 bytes)

- Method and date: curl then python3 src/fetch\_public\_listing.py; 2026-09-27
- Where the output lives: raw/ yuquanlu-live-courses.json + .sha256, raw/ measurements/live-listing-provenance.md

## E5

- Type: Join of E3 and E4 by course code, plus the saved plan
- Source: course-code join; 2026-09-27
- Method and date: raw/measurements/live-listing-provenance.md, raw/measurements/ plan-priority-summary.md

## Hashes

| Artefact                                                     | sha256                                         |
|--------------------------------------------------------------|------------------------------------------------|
| planner backup 选课地图-本地备份 (3).json (not committed)            | 62594e799e1c83a8fdc2cacd0239f36e14264b55282c76 |
| raw/sections-snapshot.json (committed)                       | ffc1ae023e59fe8a09d83584fe7ba8293eb982cce8887  |
| raw public listing download (not committed, 8,103,455 bytes) | 7c6090e40801d1ba4ebf3665c54eafaf4ec6e5e3565d99 |
| raw/yuquanlu-live-courses.json (committed)                   | see raw/ yuquanlu-live-courses.json.sha256     |

The two saved plan files are personal working files and are not committed; their hashes are recorded in raw/measurements/plan-versions.md.

## Which fields exist where

| Field group                   | Official workbooks (E3)                         | Public listing (E4)                                                      |
|-------------------------------|-------------------------------------------------|--------------------------------------------------------------------------|
| campus                        | yes                                             | <b>no field at all</b> (only inferable from course-code position 18 = Y) |
| semester                      | yes (208 autumn-only, 179 spring-only, 27 both) | no                                                                       |
| attribute, credits            | yes                                             | yes                                                                      |
| 开课周 (week range)              | <b>0 of 732</b>                                 | 347 of 347                                                               |
| 星期节次 (weekday/ period)        | <b>0 of 732</b>                                 | 347 of 347                                                               |
| 限选 (capacity) / 已选 (enrolled) | <b>0 of 732</b>                                 | 347 of 347                                                               |
| degree-programme requirement  | no                                              | no —human input required                                                 |

## Independence check

E1 is the author's own working record; E2 and E3 come from the institution that publishes the plan; E4 comes from a third-party tool that republishes the same official plan in a different shape; E5 is a join across them. The independence that matters here is that **E3 and E4 are produced by different pipelines from the same underlying plan**, which is why their coverage differs —and E1 is the only record of what actually changed between two planning attempts.

## What would contradict the findings

- A single source carrying campus, semester, week range, weekday/period and remaining seats for the same courses would falsify the central claim. Searched on 2026-09-27\*; record in `raw/search-log.md`.
- Evidence that the missing 197 codes' week/period fields exist in some fourth source would change the scope from " join and fill" to " join" .
- Evidence that the empty capacity cells in the official workbooks are intentional and meaningful (rather than simply absent) would change how " unknown" is reported.
